Dear EY Hiring Team,

Re: ET Risk & Compliance – Operations & Reporting Analyst (EY GDS)

I am applying for the Operations & Reporting Analyst role in the Enterprise Technology Risk & Compliance team. For nearly seven years I led the regional workers' compensation (ART) unit at Federación Patronal Seguros, where reporting, internal controls and cross-functional coordination were at the core of my work.

In that role I built management reports and dashboards in Oracle BI on portfolio, retention, collections and loss-ratio indicators, which leadership used to set commercial and underwriting policies. I applied internal controls to portfolio operations and payment plans, kept account records up to date in Microsoft Dynamics 365 CRM, and coordinated Collections, Claims and Prevention to retain the portfolio and recover receivables.

Since then I have strengthened the analytics side. I trained as a Data Analyst (SQL, Power BI with DAX and Power Query), built a Power BI dashboard analysing almost 98,000 IT support tickets, and reviewed the data quality of AI model outputs at Outlier. At Grupo Omint I coordinated two internal tools end to end, from requirements gathering to rollout. I am comfortable with SharePoint, Microsoft Teams, Planner and advanced Excel, and I am currently completing Google's Project Management Certificate.

What draws me to this role is its mix of governance operations, reporting and coordination: turning large volumes of information into clear, reliable reporting that helps leaders decide. I would welcome the opportunity to bring that discipline to the ETRC team. You can see live examples of my dashboards at pablohidalgo.site.

Thank you for your time and consideration.

Sincerely,
Pablo Hidalgo
